LA SITUATION JURIDIQUE ET MÉDICALE DES PATIENTS DE L'E.M. (ENCEPHALOMYÉLITE MYALGIQUE) ET LA SFC (SYNDROME DE FATIGUE CHRONIQUE)

L' Encephalomyélite Myalgique (EM) a été accepté déjà en 1969 par l' **OMS** comme une maladie neurologique.

Dans certains pays l' EM est appelé Syndrome de Fatigue Chronique (SFC). En 1993 l' SFC a été ajouté comme un additif de l' ICD-10. Le mot "fatigue" -selon la définition de l' SFC - reste toujours source de confusion et cause de nombreux problèmes pour les patients, comme a déclaré Mme Androulla Vassiliou, ancien Commissaire Européen chargé de la Santé.

L' EM peut se manifester en épidémies: une a été décrite pour la première fois en 1934.

Des experts de l' EM l'ont placé dans la même catégorie que le cancer et le dernier stade du SIDA concernant la qualité de la vie et de la souffrance.

C'est la raison pour laquelle nous demandons ce qui suit :

- à respecter le Code de l'OMS G93.3 pour l' EM comme une maladie neurologique et veiller à ce que les États membres mettent ceci en œuvre dans leur système de soins de santé;
- de respecter les droits du patient - y compris des enfants - dans tous les États membres;
- d'approuver en tant que critères de diagnostic pour l'E.M. les Canadian Consensus Criteria et le développement des Consensus de Critères Internationaux;
- à encourager le développement de la recherche biomédical.

Environ 1.200.000 de très malades patients atteints par l'E.M. en Europe sont en attente pour que le parlement reconnaissasse le Code de l'OMS G93.3.
